- Hortifit Nutrient A+B
- Rootstimulator
- Enzymes
- Bloomstimulator
- Blossom Powder

User per 100L feedwater:

Pour during the cycle 1 x per week 200ml Hortifit Enzymes in 100L feedwater. Double the dose in the last two weeks, if you want to reuse your substrate.

Growth/flowering stage:

Pour in the first two weeks of the cycle 100ml of your Rootstimulator into 100L irrigation water. Pour Hortifit Nutrient A+B till the e.c level as shown in the table.

Flowering stage:

Pour in week 2 till week 4 of the flowering stage just Hortifit Nutrient A+B into your irrigation water till the e.c level as shown in the table. Pour in week 5 till week 8 of the flowering stage 100ml Bloomstimulator into 100L irrigation water. Week 6 (flowering stage, last 3 weeks) Adjust your e.c with basic nutrient to 1.2 e.c and dispense 1 sachet on 100 liters of feed water. In week 7 and 8 dispense 2 sachets on 100 liters of feed water. Week 9: add just water.

Tips:

- Shake products before you dose this will ensure it is well mixed.
- Adjust the pH (acidity) in the end with Ph- or Ph + to the desired value.
- Hortifit recommends working with a pH range between 5.8-6.5. Hydro Substrates and airoponic systems with a pH of 5.8, 6.0 and Coco earth substrates between a pH of 6.0 and 6.5.
- Give Hortifit products to your plants with every water gift.
- The ec value of your tap water may vary by region. So take care of the dose of your basic nutriënt.
- e.c. level is referring to the measurement of the "electrical conductivity" of your substrate.
